Digital Signage Solutions

Hard- & Software Solutions from one Hand

Our philosophy...

the right information at the right time at the right place

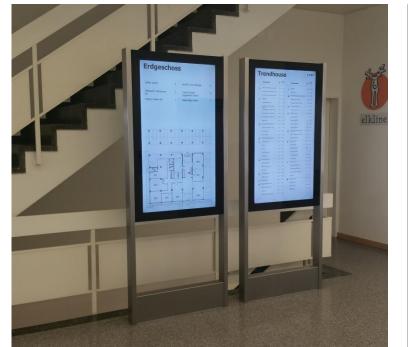

Know where to go...

History

Since 1987 multitech ag has been developing and producing electronic information and display systems for various applications. Different technologies, diverse software applications and an innovative, often customer-specific design guarantee the right solution for your requirements.

H-Type 55" screen free standing

H-Type mit 49" screen wall mounting

The H-Type

This modular information system impresses with its elegance and at the same time its robust and timeless design. Available in various sizes and with various design options such as shelves, showcase, double screens, etc., this device series can cover a wide range of needs.

55" screen with departure times of train and bus lines

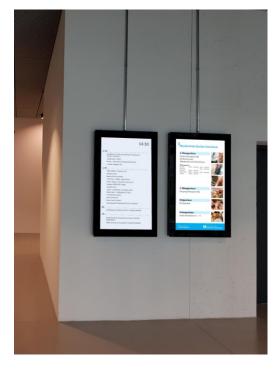

H-Type for public transport information

All transport services at this location are displayed. This includes rail, bus and tram traffic. The device has an LCE-3 player, which collects the current information every few seconds via the Internet.

H-Type mit 49" screen wall mounting

H-Type mit 49" screen wall mounting

H-Type wall models in office and commercial buildings

H-series displays with LCE-3 software are placed in the entrance area and on several floors. In addition to advertising, the guidance and general information will be displayed.

H-Type mit 49" screen wall mounting

H-Type mit 49" screen wall mounting

H-Type wall models in the Office Tower

The various tenants are listed in the entrance area. On the different floors the respective plan with the individual tenants is displayed.

49" Guidance screen

49" screen advertising

Digital display systems in shopping centers

Customer-specific housings, specially adapted to the needs of the respective customer, can be integrated excellently into the existing environment. Eye-catching and directional signage combined with a software developed by multitech for this purpose bring the optimum benefit for customers, tenants and operators in a shopping center.

Digital double display in the reception area

Digital display on the floor

Wall displays in the senior home

Displays in the entrance area and on the floors, e.g. in retirement and health care homes. The H-Type serves as the basis. The player with the corresponding software is built into the device. There are different sizes available.

Digital signage in the entrance area

Digital signage for information and advertising

Freestanding display systems

Freestanding, custom-made systems with single or multiple Screens. The materials are chooseable as required. There is also the possibility to install Screens to be rotatable. This allows presentations to be displayed in landscape or portrait format.

Digital signage in the entrance area

Digital signage in the entrance area

Digital displays for the entrance area

The attractive electronic information systems enhance your entrance area and serve a clearly understandable, visual communication with your guests, customers and employees.

Freestanding, mobile column with Wifi communication and 15" display

Freestanding column with 15" Display

Mobile digital displays

Mobile digital displays can be connected to a LAN, laptop, or wireless adapter. Once the desired content has been downloaded, it can be disconnected from the network and only requires a power supply. It is also possible to bring the contents onto the displays by using a USB stick.

10.4" Display built into the wall

10.4" display with glass in front

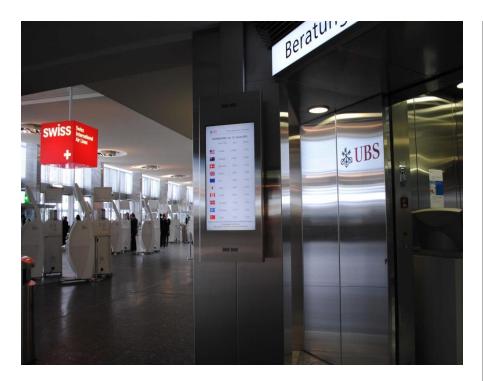

WTMI Pre Conference

Meeting 10:00

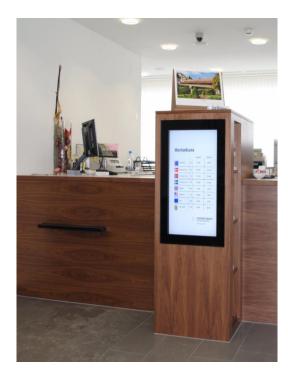

Wall displays

The small-format display boards are mainly used for the electronic signage of conference, meeting and training rooms. They are available in sizes from 10" to 23" and are manufactured in a variety of materials.

Digital display for financial information

Digital display for banks

Digital displays for banks and financial institutions

These digital displays were specially designed for applications in the financial sector. This includes information on exchange and share prices, mortgage interest rates, but also on opening hours or events. The systems can be equipped with keyboards for manual page changes (LCE-3). Financial information can be displayed directly on the screens via interface without further editing.

70" screen surface mount housing

65" screen wall mounting in a hotel

Digital information and display systems

We also offer a complete range of digital signage monitors with custom housings. Sizes from 10" to 75" are available. All screens are LCD technology for 24/7 use.

Digital counter and advertising display with 15" display

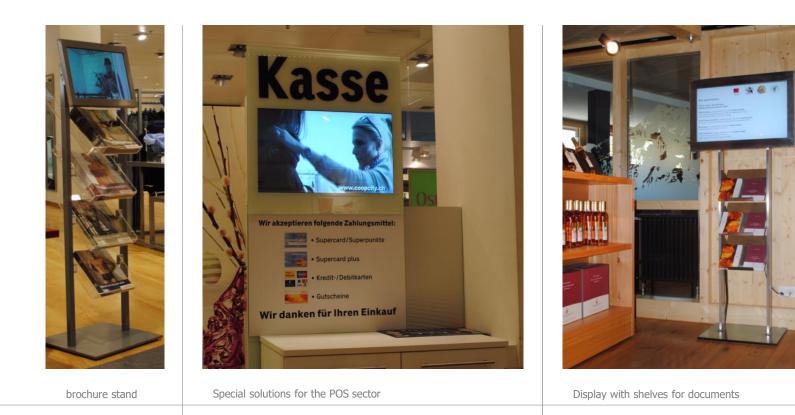

Digital counter signage with 23" Display

Digital displays for the counter area

LCE-3 with the "Interaction" option has been specially developed for electronic counter signage. The system is available in various sizes in portrait and landscape format. The housings are made to specification. Each unit is equipped with a numeric keypad that can be used to call up the various contents. User-friendly operator software is an important part of the system.

Digital advertisements in the retail sector

Due to the modular structure of the information and display systems of multitech the most different solutions can be realized. This applies equally to the design as well as for the various software solutions.

LCS-1 Player:

The LCS-1 players are designed for stand-alone use. The images and films are loaded onto an integrated storage medium with a USB stick and then automatically displayed on a presentation medium. Different animation templates can be programmed via a remote control.

Application:

Point of sales advertising, simple presentation systems, advertising systems, etc.

LCE-3 Software:

The LCE-3 software is characterized by its simple operation and its user-friendliness. Using this software, existing or new contents can be transferred quickly to any number of LCE-3 players and displayed time-controlled on the associated display media.

Application:

Shopping centers, hotels, retail trade, banks, universities, schools, libraries, etc.

LCE-3i Digital Signage Software:

The LCE-3i software has the same functions as the one called LCE-3, but with the possibility that the individual content creator can assign numbers to each image. This allows a user to call up a large number of pages individually via a numeric keyboard. Since the keyboard can be placed anywhere, this type of interactive control is on the one hand disability-friendly and on the other hand also suitable for difficult to access screens (keywords: mounting height or outside on a shop window).

Application:

Visitor guidance, information systems for complex queries, structured systems, terminals for product declarations, systems for public buildings, employee terminals, etc.

Software & Player

2 different programming options are offered:

via a local installation via our cloud

Regardless of the type of programming, each system has a management software and one or more players, including player software. Depending on the requirements of the content, you can choose between two different hardware components.

Electronic information systems from multitech are installed in more than 25 countries worldwide.

Please contact us. We will be pleased to inform you about the nearest multitech sales and service partner.
